Snug-fitting knit wrist keeps out dirt and debris

## EN407 CONTACT HEAT INFORMATION

The En 407 Contact heat rating means that the glove is exposed to temperatures between + 100°C to + 500°C. The length of time is then measured for how long it takes the material on the inside of the glove to increase by 10°C from the starting temperature (approx. 25°C). 15 seconds is the minimum accepted length of time for approval. Contact heat rating level 2 means the glove is able to withstand contact of up to 250°C for at least 15 seconds before the inside of the glove becomes 10°C warmer.
